AMENDMENTS TO THE SPECIFICATION:

Please replace paragraph **[0021]** with the following amended paragraph:

[0021] According to another aspect of the invention, a method is provided wherein the data mining models created can include simple and complex scores, static and dynamic scores, rules, rules sets, and rules systems, and composites and combinations of such scores, rules, rules sets, and rules systems. According to <u>another</u> ~~anther~~ aspect of the invention, a method is provided wherein the presentations include defined sets of content including data mining model references, scores, rules, attributes, activity suggestions, to do lists, pop-up windows, HTML segments, XML scripts, and sets of computer instructions. According to <u>another</u> ~~anther~~ aspect of the invention, a method is provided wherein the presentations include simple presentations, range based presentations, and complex presentations.

Please replace paragraph **[0022]** with the following amended paragraph:

[0022] According to <u>another</u> ~~anther~~ aspect of the invention, a method is provided wherein the method steps are accomplished over networks including the Internet and networks based on Internet technologies. According to <u>another</u> ~~anther~~ aspect of the invention, a method is provided wherein users include data mining management consoles integrated with or connected over networks that facilitate all aspects of the data mining process from data access, through preparation and data mining model creation to model deployment to disparate business user environments. According to another aspect of the invention, a method is provided wherein users include applications running on a computer, system, or other appliance integrated with or connected over networks. According to another aspect of the invention, a method is provided wherein users include thin or thick clients in a client-server or browser-server environment integrated with or connected over networks. According to another aspect of the invention, a method is provided wherein the reporting systems within the data mining system include outcome monitoring systems and presentation usage monitoring systems.

Please replace paragraph **[0023]** with the following amended paragraph:

[0023] According to <u>another</u> ~~anther~~ aspect of the invention, a method is provided wherein second inputs include updates, edits, modifications, deletions, replacements, suspensions, changes, improvements, and optimizations of the data mining models and presentations. According to another aspect of the invention, a method is provided wherein the step of creating presentations and data mining models is accomplished by a text editor, scripting tool, web development tool, or HTML editor. According to another aspect of the invention, a method is provided wherein the step of updating data mining models and presentations includes editing, modifying, deleting, replacing, suspending, changing, improving, and optimizing the data mining models and presentations.
